## ABOUT COMPANY

LO Smiles UK is the official UK branch of our Ministry of Health-approved dental hospital in Antalya.

We provide world-class dental care with a fully regulated, hospital-level infrastructure, ensuring safety, transparency and long-term results.

With 16 fully equipped surgery rooms, advanced CBCT 3D imaging, CAD/CAM digital design, and German-certified materials, our team of specialist dentists delivers precise, durable and natural-looking treatments for every patient.

We work exclusively with globally recognised brands such as Megagen, Neodent (Straumann Group), Ivoclar ZirCAD Prime, Dental Direct, Zirkonat and Straumann Zirconia, guaranteeing high stability, strong aesthetics and long-term success.

At LO Smiles UK, our mission is simple:

Safe treatment, premium materials, honest guidance, and results that protect both your health and your investment.

Teras - Terrace

# VISION & MISSION

## Vision

Cheap veneers may look fine at first, but they often lead to cracks, gum issues, infections, sensitivity and even tooth loss within just 1–2 years.

Our vision is to help patients avoid these long-term problems by raising awareness about the true cost of low-quality treatments.

We aim to guide every patient toward safe, durable and medically planned dental solutions that protect both their teeth and their investment.

## Mission

Our mission is to provide clear, honest and science-based information so patients can make the right decisions for their oral health.

By combining advanced hospital technology, certified materials and expert specialists, we ensure treatments that last far longer than low-cost alternatives.

We are committed to protecting our patients' time, health and finances through reliable, ethical and long-lasting dental care.

# TREATMENT QUALITY STANDARDS

Cheap veneer failures are not accidental.

They are the result of shortcuts, low-quality materials and missing medical protocols.

Understanding why they fail and what proper treatment requires helps patients make safe, informed decisions.

## Why They Fail

Low-quality clinics often use:

- Uncertified zirconia
- Weak composite “fake veneers”
- Poor bonding technique
- No CBCT scan
- Wrong bite adjustment
- Low sterilisation standards

Result:

- Short lifespan (1–2 years)
- Gum inflammation
- Cracks, chips, falling veneers
- Tooth sensitivity
- Infections or even tooth loss
- Higher cost to fix the damage

## What Proper Treatment Requires

Long-lasting veneers depend on:

- High-quality zirconia
- Correct tooth preparation
- Digital CAD/CAM design
- CBCT 3D planning
- A sterile hospital environment
- Skilled specialists and accurate occlusion work

Outcome:

- Safe, durable veneers
- Natural aesthetics
- Healthy gums
- 10–15+ year longevity
- Protection of both teeth and budget

# AVOID THIS

**BAD DENTISTRY**

**GOOD DENTISTRY**

## OUR MATERIALS

We work exclusively with internationally certified, long-lasting and clinically proven materials to ensure safe, durable and natural-looking smile restorations.

### Implant Systems

Megagen

Strong primary stability, advanced thread design, ideal for immediate loading and complex bone cases.

Neodent (Straumann Group)

Reliable full-arch solutions backed by the Straumann Group, excellent biomechanics and predictable long-term success.

### Premium Zirconia

Ivoclar ZirCAD Prime

High-end multilayer zirconia, perfect aesthetics + superior strength.

Dental Direct

Natural translucency and long-lasting durability.

Zirkonat

Strong, European-standard zirconia widely used in advanced aesthetic cases.

Straumann Zirconia

Premium-grade restoration material for maximum stability.

### Quality Assurance

All materials we use are:

- Internationally certified
- Durable and biocompatible
- Supported by scientific research
- Designed for long-term success

This ensures every patient receives safe, stable and high-quality treatment that protects both their health and investment.

# OUR PROCESS

We follow strict hospital standards and a medically planned workflow to ensure every patient receives safe, long-lasting and high-quality dental results. We combine advanced technology with certified materials to deliver treatments that protect both your health and your investment.

1

## Hospital Standards

Our treatments are carried out in a fully regulated, Ministry of Health-approved dental hospital offering:

- 16 fully equipped surgery rooms
- German-certified materials
- CAD/CAM digital production
- CBCT 3D tomography
- Professor-level specialists
- Sedation options for anxious patients
- Direct contact with the hospital — no agencies involved

2

## Understanding the Risks of Cheap Veneers

Low-quality veneers often lead to:

- ✗ Cracks, breaks or falling veneers
- ✗ Bulky or artificial appearance
- ✗ Gum inflammation and infections
- ✗ Tooth damage or sensitivity
- ✗ Replacements every 1–2 years

Cheap treatment means higher long-term cost and health risks.

3

## Why Our Veneers Last Longer

We use premium materials and advanced planning to ensure:

- ✓ Natural, aesthetic results
- ✓ Strong, long-lasting restorations
- ✓ Healthy gum integration
- ✓ Precision digital design
- ✓ 10–15+ years lifespan with proper care

Your smile is designed with safety, durability and transparency at every step.

# QUALITY ISN'T EXPENSIVE. CHEAP TREATMENT IS.

Choose medically planned, long-lasting care and protect your smile with the right team.

We're here to guide you.
